Dear Hiring Manager,

I am writing to express my interest in software engineering opportunities within your organization. With over 13 years of experience building distributed systems, secure infrastructure, and high-performance platforms, I bring a strong foundation in systems design along with extensive hands-on development experience.

Currently, I serve as a **Software Principal Engineer @ Dell Technologies**, where I design and develop cloud-native edge solutions. My work includes implementing high-availability clustering using the Raft consensus algorithm, building secure communication using TPM-backed mTLS, and developing NFS-based backup and restore systems integrated with enterprise data protection platforms. I have also led teams, contributing to architectural decisions and delivering end-to-end features in distributed environments.

My core technical expertise includes C, C++, Golang, and Python, along with strong knowledge of Linux internals, multithreading, and performance optimization. I have hands-on experience in distributed systems, container orchestration (Kubernetes, Docker, Podman), and security domains such as PKI, TLS/mTLS, and TPM 2.0. Across my career, I have worked on diverse domains including blockchain systems, air traffic control software, payment platforms, and embedded systems, enabling me to adapt quickly to new challenges.

I am particularly interested in solving complex systems problems, building scalable and reliable infrastructure, and contributing to production-grade systems that operate at scale. Additionally, I have leveraged AI-assisted, spec-driven development (SDD) approaches to improve engineering efficiency and accelerate delivery timelines while maintaining high quality standards.

I would welcome the opportunity to contribute my skills and experience to your team.

Thank you for your time and consideration.

Sincerely,
Pankaj Kumar Thapa
